## ENROLLMENT FORECAST SUMMARY

Low, middle, and high forecasts correspond to population growth scenarios incorporating different assumptions about migration. Fertility rates and public school capture rates (the share of District residents enrolled in District schools) do not vary among the three series.

The low series uses migration rates only slightly higher than those observed in the current decade, when net migration of school-age children has been negative in most years. In the middle series net migration levels gradually increase until they are similar to those observed between 2000 and 2010. In the high series net migration exceeds 2000 to 2010 levels to be more consistent with residential capacity and the housing allocation in the City of Portland's 2035 Comprehensive Plan. Growth rates in the high forecast are similar to those in the DDSD forecasts prepared by PRC in 2015.

Forecasts for individual schools are consistent with the middle series forecast, with growth rates based on the relative increase in housing by unit type in the 2035 Plan.<sup>1</sup>

Percent of persons below poverty level	23.9%	●	2.5%	23.7%	●	2.2%	

\* **Green**, **yellow**, and **red** icons indicate the reliability of each estimate using the coefficient of variation (CV). The lower the CV, the more reliable the data. **High reliability** (CV <15%) is shown in green, **medium reliability** (CV between 15-30% - be careful) is shown in yellow, and **low reliability** (CV >30% - use with extreme caution) is shown in red. However, there are no absolute rules for acceptable thresholds of reliability. Users should consider the margin of error and the need for precision.

\*\* Indicates that the two estimates are statistically different based on results of z-test taking into account the difference between the two estimates as well as an approximation of the standard errors of both estimates.

\*\*\* Vacant units include those for sale or rent, those sold or rented but not yet occupied, those held for seasonal, recreational, or occasional use, as well as other vacant such as homes under renovation, settlement of an estate, or foreclosures.

Source: U.S. Census Bureau, American Community Survey 5 year estimates. Surveys are collected over a 60 month period. Estimates represent average characteristics over the entire period. Tabulated by Population Research Center, Portland State University, with additional calculations from source data as needed.
